

## *“Wind of the coast” project*

### WP3 Exchange of experience and best practices

## WORKSHOP 1 – THE POLICIES

*Ravenna, 11<sup>th</sup> February 2010*

***Toward the policies simplification: the study case of the  
Municipality of Ravenna – best practice sharing***

***By Province of Ravenna***

Formal request of the Province of Ra to the Municipality of Ra to simplify procedures for the installation of small wind systems

*through*

**SEA - STRATEGIC ENVIRONMENTAL ASSESSMENT**

It's the most appropriate planning tool to express a political strategy of environmental preservation, because it becomes a concrete instruction for interventions

*amendment of*

**SANDY SHORE MANAGEMENT PLAN OF THE MUNICIPALITY OF RA**

According to the L.R. 9/2002 it regulates the interventions along the sandy shore and of the already existing buildings/constructions on site. The document is the result of a consultation Municipality-Province on environmental preservation and it also indicates the competent bodies about environment

The procedure was supported by the **technical assessment report** defined by the Territorial Planning Sector – Urban Service of the Province of Ravenna

The technical report refers to:

- The environmental preservation strategies and addresses both of the Province and Municipality
- The assessment of the contents of the sandy shore operative plan 2009 (preservation strategy, assessment of the impact of human activities, etc.)
- The coherence of the above mentioned plan with the L.R. 20/2000 and the structural/territorial planning of the Municipality
- The approval of WICO project and therefore of the formal request (Dec. 2009) of the Province to the Municipality to start a consultation to simplify the procedures for the installation of small wind systems along the coast line

## According to:

- the positive evaluation by the Province of the coherence of the sandy shore operative plan with the environmental preservation strategy (ref. technical assessment report)
- the consultation Municipality-Province and the Province request of simplification of the procedures for the installation of small wind systems

### ***The simplification adopted by the Municipality within the sandy shore management plan***

The wind and solar systems installed with the only purpose of self-maintenance of buildings/businesses, will benefit of simplified authorisation procedures. Hence it is not necessary to wait for the answer of the Public Administration to the Declaration of Starting of Activity (D.I.A Denuncia inizio lavori), which is normally obligatory.

On the other hand, considering that the area encloses CIS and SPZ, it is still necessary to get the authorization of the Superintendence 

Cooperation and a series of targeted meetings are under development with simplification purpose
